

Table of Contents

Cover page	i
Names and contact details of SPIRE Co-Investigators	ii
List of SPIRE Associate Scientists	iii
Executive summary	iv
Table of contents	ix
1 Scientific objectives and capabilities	
1.1 Introduction	1.1
1.1.1 Scientific capabilities of SPIRE	1.1
1.1.2 Scientific drivers for SPIRE	1.3
1.2 Cosmological surveys with SPIRE	1.4
1.2.1 Star formation history of galaxies	1.4
1.2.2 Detailed studies of high-redshift ultraluminous IR galaxies and quasars	1.8
1.2.3 Active galaxies	1.9
1.3 Galaxies in the local universe	1.10
1.3.1 The ISM in nearby galaxies	1.10
1.3.2 Dust cycling in the extragalactic ISM	1.11
1.3.3 Galaxy interactions and nuclear activity	1.12
1.3.4 Nearby low-metallicity galaxies as models of primeval galaxies	1.13
1.4 Protostars and young stellar objects (YSOs)	1.14
1.4.1 Broad-band protostellar surveys of active and quiescent molecular clouds	1.14
1.4.2 Spectroscopic studies	1.17
1.5 Main sequence and evolved stars	1.18
1.5.1 Mass loss from evolved stars	1.18
1.5.2 Dust discs around main sequence stars	1.19
1.6 The interstellar medium	1.20
1.6.1 Temperature structure and cycling of dust in the ISM	1.20
1.6.2 Spectral imaging with the SPIRE FTS	1.21
1.7 The solar system	1.23
1.7.1 Spectroscopic observations with SPIRE	1.23
1.7.2 Photometric/spectrophotometric observations with SPIRE	1.24
2 Technical description	
2.1 Overview	2.1
2.2 Instrument description	2.4
2.2.1 Cold focal plane unit	2.4
2.2.2 Photometer	2.4
2.2.3 Spectrometer	2.6
2.2.4 Common elements	2.9
2.2.5 Warm electronics	2.15

2.3 Instrument operating modes and AOTs	2.18
2.3.1 Photometer	2.18
2.3.2 Spectrometer	2.19
2.4 Scientific performance	2.19
2.4.1 Choice of focal plane array type	2.19
2.4.2 FTS wavelength coverage and pass-bands	2.20
2.4.3 Instrument sensitivity model	2.20
2.2.5 Array development and back up option for focal plane	2.22
2.5.1 Detector array development schedule	2.22
2.5.2 Detector development heritage	2.23
2.6 Back up option	2.24
2.7 Detector development risk assessment	2.26
3 Data reduction and scientific analysis plans	
3.1 Introduction	3.1
3.2 Functional description	3.1
3.2.1 Monitoring instrument operations	3.1
3.2.2 Instrument calibration	3.3
3.2.3 Quality monitoring	3.3
3.2.4 Science data processing	3.3
3.2.5 User support	3.5
3.3 Programme	3.5
3.3.1 Development phase	3.5
3.3.2 Operations Phase	3.7
3.4 Infrastructure and hardware	3.8
3.4.1 Operations Centre	3.8
3.4.2 DAPSAS centres	3.9
3.5 Management	3.9
3.5.1 Schedule	3.10
3.5.2 Resources	3.11
4 Instrument calibration	
4.1 Calibration Requirements	4.1
4.1.1 Photometric accuracy	4.1
4.1.2 FTS-specific calibration	4.2
4.1.3 Bolometer-specific calibration	4.2
4.1.4 Other considerations	4.2
4.1.5 On-board calibration sources	4.3
4.1.6 Astronomical sources	4.3
4.2 Ground Calibration Facility	4.3
4.2.1 Options for the calibration facility	4.3
4.2.2 Instrument test cryostat	4.4
4.2.3 Calibration sources	4.4

5 Instrument system-level Assembly, Integration and Verification (AIV)	
5.1 Model philosophy	5.1
5.2 AIV procedure guidelines	5.1
6 Flight operations	
6.1 Operating Modes	6.1
6.1.1 Basic operating modes	6.1
6.2 Backup option observing modes	6.2
6.3 Instrument commanding	6.3
6.3.1 High-level commands	6.3
6.3.2 Instrument on-board software	6.3
6.3.3 Instrument command scripts	6.3
6.4 General requirements from the spacecraft	6.3
6.5 Data packet types	6.4
7 Qualifications and experience of the PI team	
7.1 Experience of participating institutes	7.1
7.2 Experience of SPIRE Co-Is and key personnel	7.4
8 Organisation and management structure of the PI consortium	
8.1 The PI and the Co-PI	8.1
8.2 The SPIRE Steering Group	8.1
8.3 Co-Investigators	8.1
8.4 Associate Scientists	8.3
8.5 Project Manager (Dr. Ken King, RAL)	8.3
8.6 Project Scientists (Dr. Walter Gear, MSSL; Dr. Jean-Paul Baluteau, LAS)	8.3
8.7 Instrument Scientist (Dr. Bruce Swinyard, RAL)	8.4
8.8 Systems Engineer (Dr. Louis Rodriguez) and Systems Team	8.4
8.9 ICC Scientist (Dr. Sebastian Oliver, ICSTM)	8.4
8.10 Local managers and institute responsibilities	8.4
8.11 AIV Engineer	8.5
8.12 Calibration Scientist	8.5
8.13 The Instrument Control Centre (ICC)	8.5
8.13.1 The ICC Steering Group	8.6
8.13.2 The ICC Development Manager (Dr. Ken King, RAL)	8.6
8.13.3 The ICC Operations Manager	8.6

8.13.4 The SPIRE Data Analysis and Calibration Group	8.6
--	-----

9 Publicity plan

9.1 Introduction	9.1
9.2 Scientific/Technological	9.1
9.2.1 With the general public in mind, what is new or different about this experiment?	9.1
9.2.2 How would you position the experiment for the general public in terms of what it will discover?	9.1
9.2.3 How will this experiment contribute to our knowledge?	9.1
9.2.4 What questions will the experiment answer?	9.1
9.2.5 With the general public in mind, what is new or different about the technology for this experiment?	9.2
9.2.6 What will be of interest visually in the design and development of this instrument or in the results it produces?	9.2
9.2.7 What specialist expertise will be employed in the instrument's development?	9.2
9.2.8 With the general public in mind, what can be described - in the long term - as benefits for mankind derived from the mission and its elements?	9.3
9.3 Socio-economic	9.3
9.3.1 What are the socio-economic benefits of your experiment for your region/country (e.g., employment)?	9.3
9.3.2 What links or partnerships with the local community will you be able to implement (e.g., links with local schools).	9.3
